

Frequently Asked Questions

Wine Storage

- **How do I keep my wine unit running efficiently and as cold as it needs to be?**

Try to keep your wine unit stocked as the more bottles you have, the cooler your unit will run. Glass transfers coolness... so the more bottles, the more glass, thus the more transference of refrigeration.

- **What if I have different kinds of wine but just one wine unit?**

For different varietals choose a multiple temperature zone unit. Your red, white and sparkling wines can be stored at different temperatures.

- **Can I store beer or soft drinks in my wine refrigerator?**

It is not recommended...The temperature in a wine refrigerator will not chill the beer or soft drinks low enough to be enjoyed.

- **What should I consider in choosing an appropriate Wine Storage unit?**

First, know what width you can accommodate. Explain to your appliance advisor what type of wine you drink, if you collect wine, and the approximate dollar value of the bottles you purchase. There are wine storage units for every taste, design and budget.
